

DG-05 BINARY DATA GENERATOR KIT

DG-05 Binary data generator provides 8, 16, 24 bit variable data pattern output at various user defined clock frequencies. It is used to supply binary data pattern to any of digital communication kit requiring binary data pattern as input signal. It has the facility to take external clock signal as input source to generate data pattern.

FEATURES:

- 8, 16, 24 bit binary data output
- User selectable clock
- Clock output provided as reference.

TECHNICAL SPECIFICATIONS:

Internal Clock Frequency : 125KHz, 250KHz, 500KHz.

External Clock Frequency : 125KHz to 1MHz

Data Generator : 8,16 &24 bit binary data.

Inter Connection: 2mm banana socket

Power Supply: GND, +5V.

ACCESSORIES:

Red Long Links	: 04 Nos.
Crocodile Links	: 02 Nos.
Power Supply	: 01 No.

FALCON
