

Automatic Water Dispenser for construction industry

Model - PANERA

The construction industry suffers largely due to the illiterate labors who mix the water to cement. There is a staggering number of weak structures resulting from ignorance or overlooking the water cement ratio. The quantity of water added to concrete ultimately & finally decides the strength of concrete. Every other component of the admix is fairly accurately measured & added EXCEPT water. This ignorance leads to cracks in structures, weakening the concrete further & the life span shortens considerably. RMCs are available but are very expensive. To help the builders who do not compromise the quality of their concrete & who don't want to go for RMC, we have devised this water dispenser. It's tough, durable, compact & easy to install & maintain. This unique product delivers consistently accurate quantity of water every time, once you set the batch.

Available in 3 versions

Normal flow

Big Flow

Super Flow

Technical Specifications:

| | |
|--------------------|--|
| ENCLOSURE | PORTABLE STEEL FRAME |
| ELECTRICALS | 230 V AC (50Hz) +10% |
| PUMP | 0.5 HORSEPOWER SELF PUMPING |
| FLOW RATE | 2000 LITER / HOUR |
| BATCHING | 0.1 TO 999999 LITERS |
| SENSOR | WORLD FAMOUS VATS SENSOR |
| FILTER | SPECIALLY DESIGNED (S.S.) MESH |
| RESET | REMOTE OPERATION BY RESET SWITCH |
| SIZE | SUITABLE TO KEEP ON TOP OF 200 LITER BARREL |
