

FEED THROUGH TERMINAL BLOCKS

In Spring Clamp Terminal Blocks the wire is held directly against the current bar by pre-stressed spring clamps.

The spring clamp is operated by using a screw driver to provide an access to the wire through an opening in the spring clamp. The inserted wire gets clamped on to the current bar when the screw driver is removed.

Cross Connection is done with Insulated Push-in / wire type shorting links.

Step Down shorting links are used for shorting spring clamp Terminal Blocks of different sizes. For more details refer page 142.

The terminals marked with  can be used in potentially explosive atmosphere. For detailed information refer page 157.
