Professional Grade RF Audio Bug / 300M Wireless Transmission

RF AUDIO BUG 300M

Professional Grade RF Audio Bug 300M Wireless Transmission is a second generation version wireless audio surveillance gadget you can secretly listen to conversations in another room from up to 300+ meters away. Join the professionals in the world of spy games, surveillance and investigation with the ultimate RF audio bug!

Professional Grade RF Audio Bug “spy” kit contains both a audio transmitter and receiver. The small wireless transmitter is a small profile unit with a built-in microphone and flexible antenna enabling it to be easily hidden anywhere in the field such as under tables, chairs, desks, etc. The receiver has an earphone jack for on the spot listening and an extra 3.5mm audio out jack for recording to digital audio recorder, cassette tape, or portable DVR. This is an incredibly flexible and full-featured audio bug sure to help you catch and record the on-the-spot audio data you need.

Receiver

Transmitter
