

Single Point Lubricator

simalube, the compact lubricator that is economical, universally adaptable, and a friend to our environment.

Economical Iubrication

Using simalube, the lubricant can be applied directly to the lubrication point. The simalube lubricator is activated with a simple twist of the dispensing dial on the top of the lubricator, and can be altered at any time. The lubricant level can always be monitored through the inspection window. simalube is ideal for demanding applications such as lubrication points in difficult to reach locations or within dangerous production zones. simalube is especially well suited for lubrication points which may easily be overlooked or forgotten. These, often critical, lube points are provided a consistent delivery of lubricant reliably and automatically, 24 hours a day for up to one full year. Damages caused by over or under lubrication, and the high costs associated with repairing them, can be minimized with simalube.

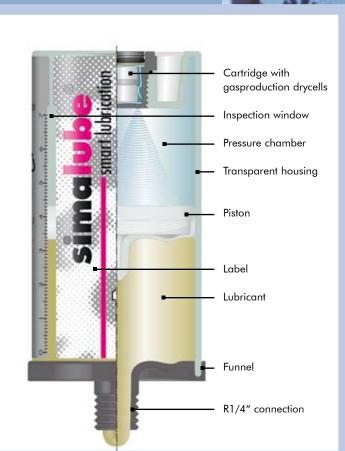

The new generation of simulube lubricators

Cartridge with gas producing drycells

The dispensing period is variable and can be easily adjusted (1–12 months)

Universal application

simalube is available with a wide range of standard greases and oils. Customer specific lubricants can be used if suitable. The dispensing time on the simalube lubricator is variable between one and twelve months. The flexible delivery time gives the end user complete control over the amount of lubricant being applied. simalube delivers lubricant reliably throughout a temperature range of -20 to +55 °C (-4 to +131 °F). simalube is universally adaptable to most lubrication tasks through the use of the available accessory programme.

Environmentally friendly and refillable

simalube is environmentally friendly as it does not contain any toxic liquids, batteries, motors, or gears. When exhausted, the simalube can either be recycled through standard recycling channels, or fitted with a new gas generating cartridge, easily refilled and put back into service.

simalube can be filled as well as refilled by using a standard barrel pump that is typically used to fill grease guns.

Applications

For further information on products and applications please request a simulube data sheet. You can find a list of simalube distributors at www.simalube.com

simatec smart technologies

simatec ag, Wangen a.Aare, Switzerland

simatec maintenance products

World class lubrication, mounting and dismounting

With 3 products lines, simatec takes care of your critical machinery and plant operation to ensure maximum uptime.

The automatic single point lubricator simulube can be adjusted from 1 to 12 months using the unique gas-producing drycell that is patented world-wide. The drycell generates pressure that pushes the grease or oil into the lubrication point.

The simatherm induction heaters provide fast warm-up of circular metal parts, for example bearings, for hot-mounting parts with an interference fit. Inductive heating of metal workpieces is cost-effective, time-saving and protects the environment. simatec is a global leader in thermal mounting technologies.

The simatool product range is designed for a quick, precise and safe mounting and dismounting of bearings and seals. simatools are used around the globe in machinery repair and maintenance shops.
